U.S. Patent No. 5,979,889, issued on November 9, 1999 to Klopfenstein, discloses an apparatus for generating a vacuum. The apparatus consists of a stem member, a suction cup mounted on the stem member, and a means of supporting the movement of the stem member. The vacuum in the suction cup causes a portion of the signature to be gripped by the suction cup and moved relative to a stack of signatures in a hopper upon movement of the stem member. The means for creating a vacuum the suction cup, communicated by the stem member, is a venturi tube.

U.S. Patent No. 5,928,537 issued on July 27, 1999 to Fortune, teaches a pneumatic pickup tool for small parts which may operate as a suction cup for holding small parts or as a venture effect lift device. A simple air switch allows the operator to select whether a pneumatic circuit provides vacuum to the pickup tool or positive air flow for the venturi lift device.

U.S. Patent No. 5,795,001 issued on August 18, 1998 to Burke, demonstrates a vacuum device for handling articles. The device includes a suction cup having pliable side walls, with an electric motor coupled to a vacuum pump. In the hand held portion of the device attached to the suction cup, an electronic circuit allows the operator to directly control application of the vacuum to the suction pump.

U.S. Patent No. 4,750,768 issued on June 14, 1988 to Kumar, describes a pneumatic vacuum gripper, utilizing a fluid amp sensor to detect objects in contact with the vacuum cup and subsequently activate the main venturi vacuum generator to 'grip' the object to be lifted. An external release signal cuts the vacuum 'off', allowing the lifted object to be released.
